

SCHOOL OF COMPUTER SCIENCE AND ARTIFICIAL INTELLIGENCE		DEPARTMENT OF COMPUTER SCIENCE ENGINEERING											
ProgramName:B. Tech		SET-A	AcademicYear:2025-2026										
Roll No.													
Instructor(s)Name		1. Dr. Venkataramana 2. Dr. Ch. Sridhar 3. Mr. Kundan											
CourseCode	24CS002PC215	CourseTitle	AI Assisted Coding										
Year/Sem	II/I	Regulation	R24										
Date and Day of Assignment	22.08.2025	Time(s)	01.00PM To 03.00PM										
Duration	2 Hours	Applicableto Batches	24BTCAIAIB09, 24BTCAIAIB10										
Lab Test :1(Present test number)/4(Total number of tests)													
Q.No.	Question		ExpectedTime to complete										
1	Task Description#1 Write Python function with the help of GitHub Copilot and VS Code to classify the people based on Age Group. And explain the code with required comments <table><tr><td>Age Range</td><td>Age Group</td></tr><tr><td>0 – 12 years</td><td>Child</td></tr><tr><td>13 – 19 years</td><td>Teen</td></tr><tr><td>20 – 59 years</td><td>Adult</td></tr><tr><td>60 years & above</td><td>Senior</td></tr></table> Prompt: write a python function that classify people based on Age Group by taking the in put from the user the function name is Age_Classifies it should classifie them to child , teen,adult ,senior and print the output. Code:		Age Range	Age Group	0 – 12 years	Child	13 – 19 years	Teen	20 – 59 years	Adult	60 years & above	Senior	22.08.2025 03.00PM
Age Range	Age Group												
0 – 12 years	Child												
13 – 19 years	Teen												
20 – 59 years	Adult												
60 years & above	Senior												

```

aiac lab test 1 > task 1.py > Age_Classifies
1 def Age_Classifies():
2     try:
3         age = int(input("Enter your age: "))
4         if age < 0:
5             print("Invalid age entered.")
6         elif age <= 12:
7             print("You are classified as: child")
8         elif age <= 19:
9             print("You are classified as: teen")
10        elif age <= 59:
11            print("You are classified as: adult")
12        else:
13            print("You are classified as: senior")
14    except ValueError:
15        print("Please enter a valid integer for age.")
16
17 # Example usage
18 Age_Classifies()

```

Output:

```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS
• PS C:\Users\KOUSHIK\OneDrive\Desktop\aiac> & C:/Users/KOUSHIK/AppData/Local/Microsoft/WindowsApps/python3.11/task 1.py
Enter your age: 45
You are classified as: adult
• PS C:\Users\KOUSHIK\OneDrive\Desktop\aiac>

```

Output 2:

The screenshot shows the Visual Studio Code interface with the file explorer on the left, the code editor in the center, and the terminal at the bottom. The code editor displays the `Age_Classifies()` function. The terminal shows the command `task 1.py` being executed, followed by the prompt `Enter your age: 45` and the output `You are classified as: adult`. The terminal also shows the command `task 1.py` being executed again, followed by the prompt `Enter your age: 12` and the output `You are classified as: child`.

code explanation:

This code defines a function called `Age_Classifies()` that asks the user to enter their age and then classifies them into one of four categories: child, teen, adult, or senior. Here's how it works:

- It prompts the user to input their age.
- It checks if the input is a valid integer. If not, it prints an error message.

- If the age is less than 0, it prints "Invalid age entered."
 - If the age is between 0 and 12 (inclusive), it classifies as "child."
 - If the age is between 13 and 19 (inclusive), it classifies as "teen."
 - If the age is between 20 and 59 (inclusive), it classifies as "adult."
 - If the age is 60 or above, it classifies as "senior."
- The function is called at the end, so when you run the script, it will execute this classification process.

Expected Output#4

- Age_Classifies function

Task Description#2

- Write Python program in cursor AI for **student class** with attributes like Name, Roll no, Marks and also construct a method i.e., **display_details** to display name, rollno and marks

Expected Output#5

- Student Class and Display Details

Prompt:

Write Python program for student class with attributes like Name, Roll no, Marks and also construct a method ,make display_details to display name, rollno and marks and make it so that it takes the input and prints the output

Code:

Output:

```
PS C:\Users\KOUSHIK\OneDrive\Desktop\aiac> & C:/Users/KOUSHIK/AppData/Local/Microsoft/WindowsApps/python3.11.exe "c:/Users/KOUSHIK/OneDrive/Desktop/aiac/aiac lab test 1/task 2.py"
Enter student's name: koushik
Enter student's roll number: 2403a52258
Enter student's marks: 88
Name: koushik
Roll No: 2403a52258
Marks: 88.0
PS C:\Users\KOUSHIK\OneDrive\Desktop\aiac>
```

Code explanation:

- The `__init__` method initializes the student's name, roll number, and marks with default values.
- The `input_details` method prompts the user to enter the student's name, roll number, and marks. It handles invalid input for marks by setting it to 0 if the input is not a valid number.
- The `display_details` method prints the student's name, roll number, and marks.
- At the end, an instance of `Student` is created, details are input by the user, and then displayed.

This script allows you to enter and view a student's basic information.

Note: Report should be submitted a word document for all tasks in a single document with prompts, comments & code explanation, and output screenshots

Evaluation Criteria:

Criteria	Max Marks
Factorial Function (Task#1)	5
Sorting Function (Task#2)	5
Viva	5
Total	15 Marks
